

For the scenario below identify the entities, their attributes and appropriate keys

The Angel Warehouse

The Angel Warehouse stores items for its parent company. The warehouse is organised into **bays**, which are storage areas, but the items themselves are stored in bins. **Each bay contains a number of bins. Each bay is identified by a unique bay number and the bay location and the height of the bay are recorded.** Each **bin** has a **different number within the bay**, always starting with bin no. 1, and while some bays have only 5 bins some have over 50. **The size of each bin is recorded.**

Some bays have a parking spot for one **fork lift** to help move items round the warehouse and lift items into bins. Each fork lift is allocated to a bay. **Each fork lift has a unique equipment number and the maximum carrying weight of the fork lift** needs to be known. **Some fork lifts are petrol driven while some are electric.**

For all bins the maximum loaded weight must be known.

When an **item** is taken into the warehouse it is **assigned a unique number** and **the date is recorded as well as the item weight.** Bins can store a number of items and when an item is put in a particular bin this date is also recorded. Items can be moved back and forth between bays and bins to optimise the warehouse storage.

Keys:

[] - Entity

[] - Attributes

[] - Keys

Bays (Entity)

- Bay Unique number (key)
- Bay location
- Height of bay
- Number of bins
- Parking Spots

Bin (Entity)

- Bin Number (key)
- Bin Size
- Bin maximum weight
- Number of items in the bin
- Item dates

Forklift (Entity)

- Unique equipment number (key)
- Maxium holding weight
- Petrol forklift
- Electric forklift

Item (Entity)

Unique item number (key)

Date of item

Weight of item
